

Accessing intranet (139.91.x.x) outside FORTH-ICS

Users outside FORTH-ICS running Ms Windows XP should do the following:

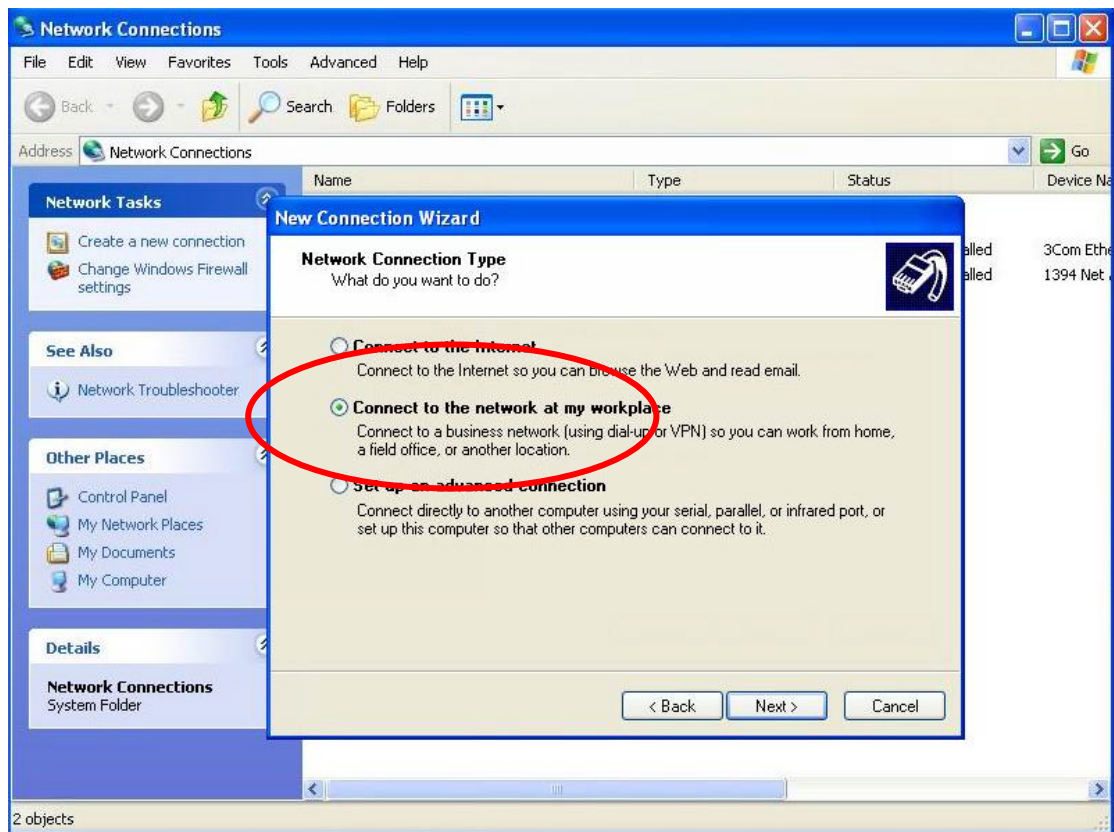

- From Network connections (start, settings, network connections right click and select open)

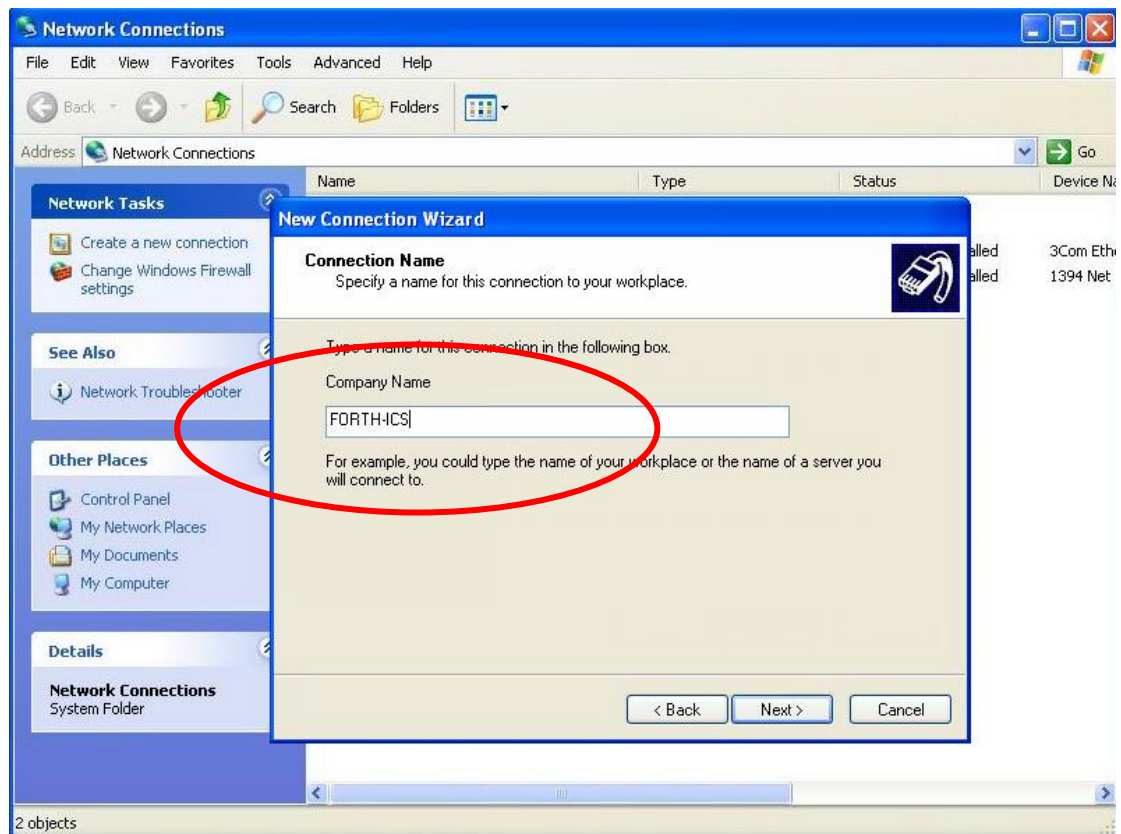

- Click on Create a new connection

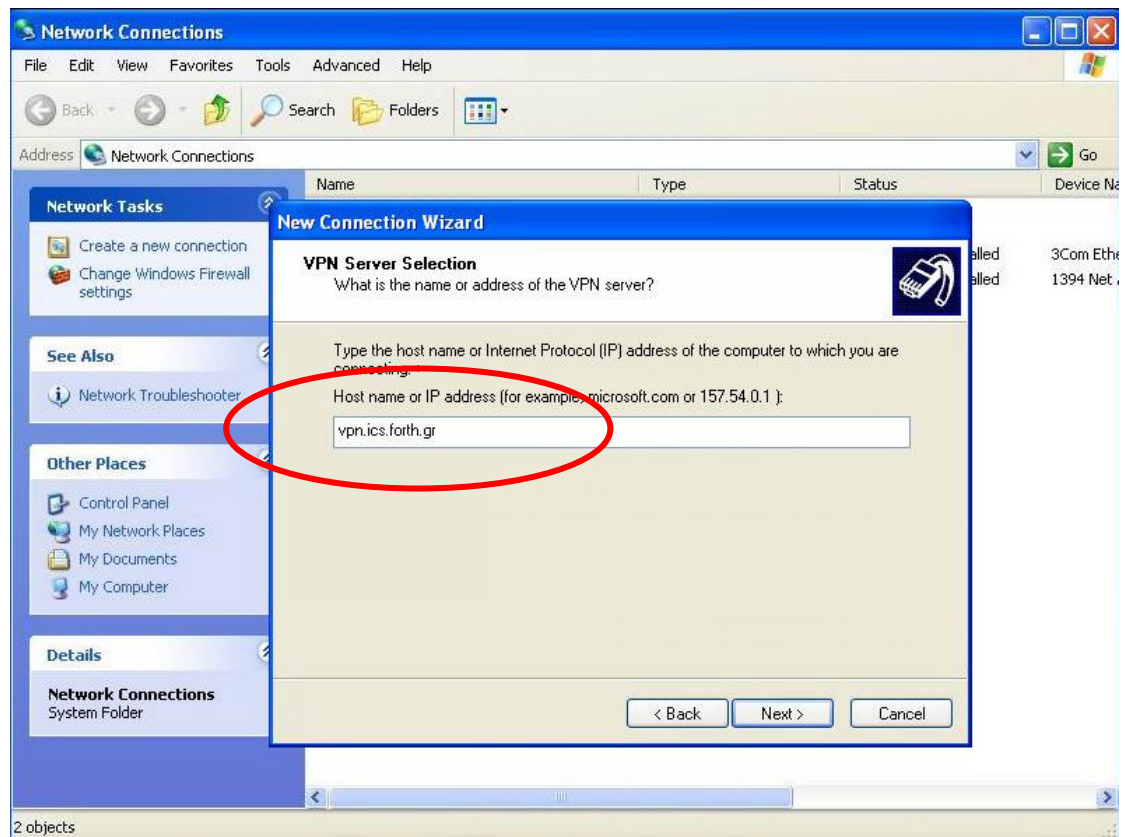

- Click on button next

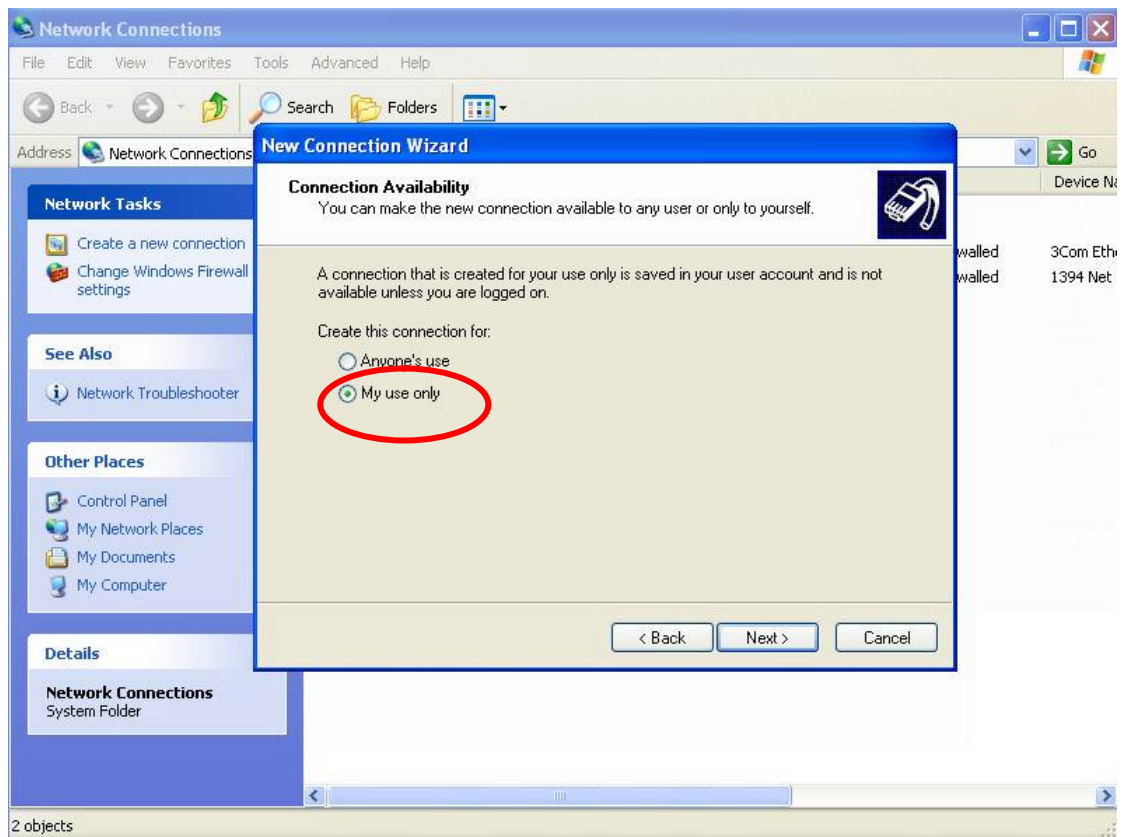

- Select Connect to the network at my workplace

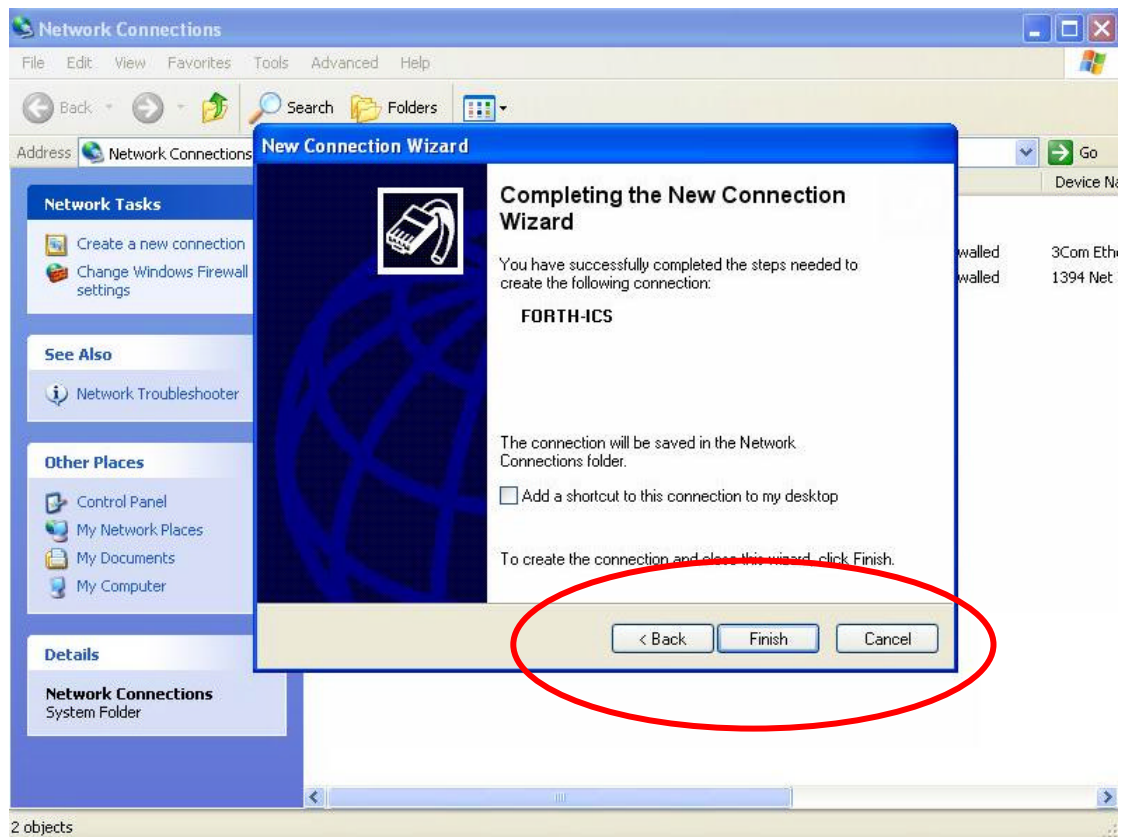

- Type a name for the connection

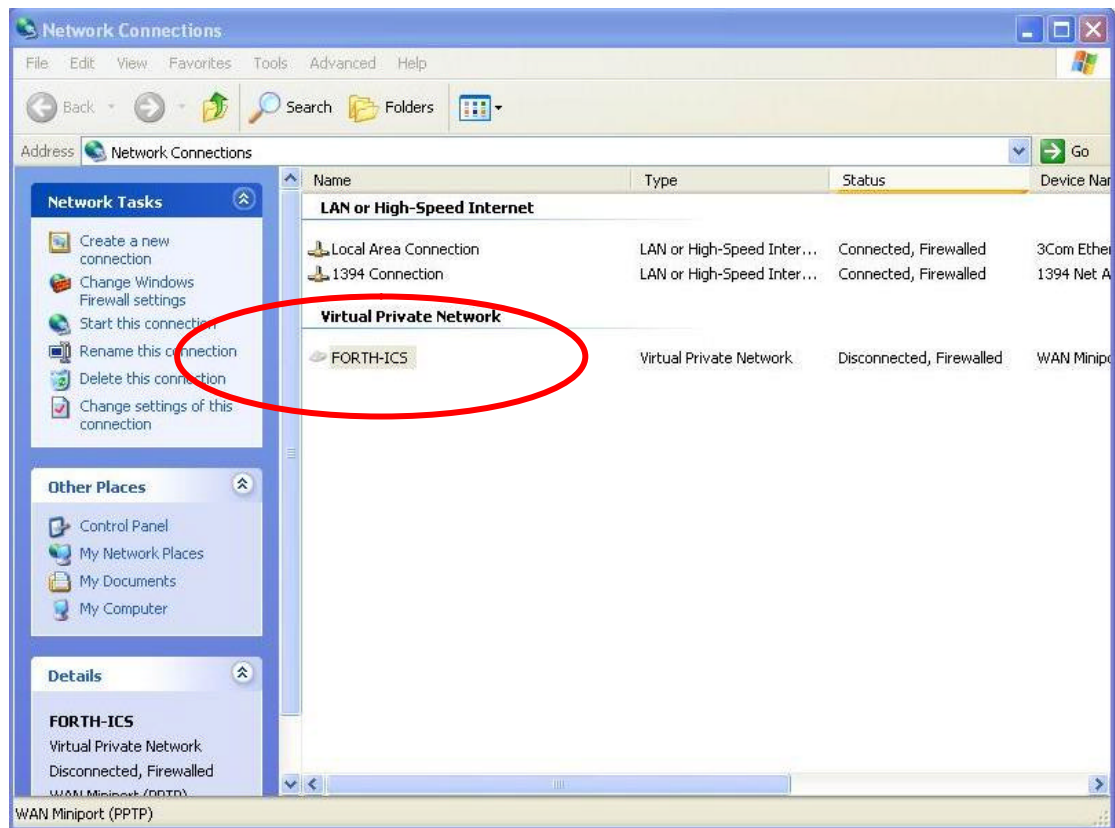

- Type the host name of the VPN server : vpn.ics.forth.gr

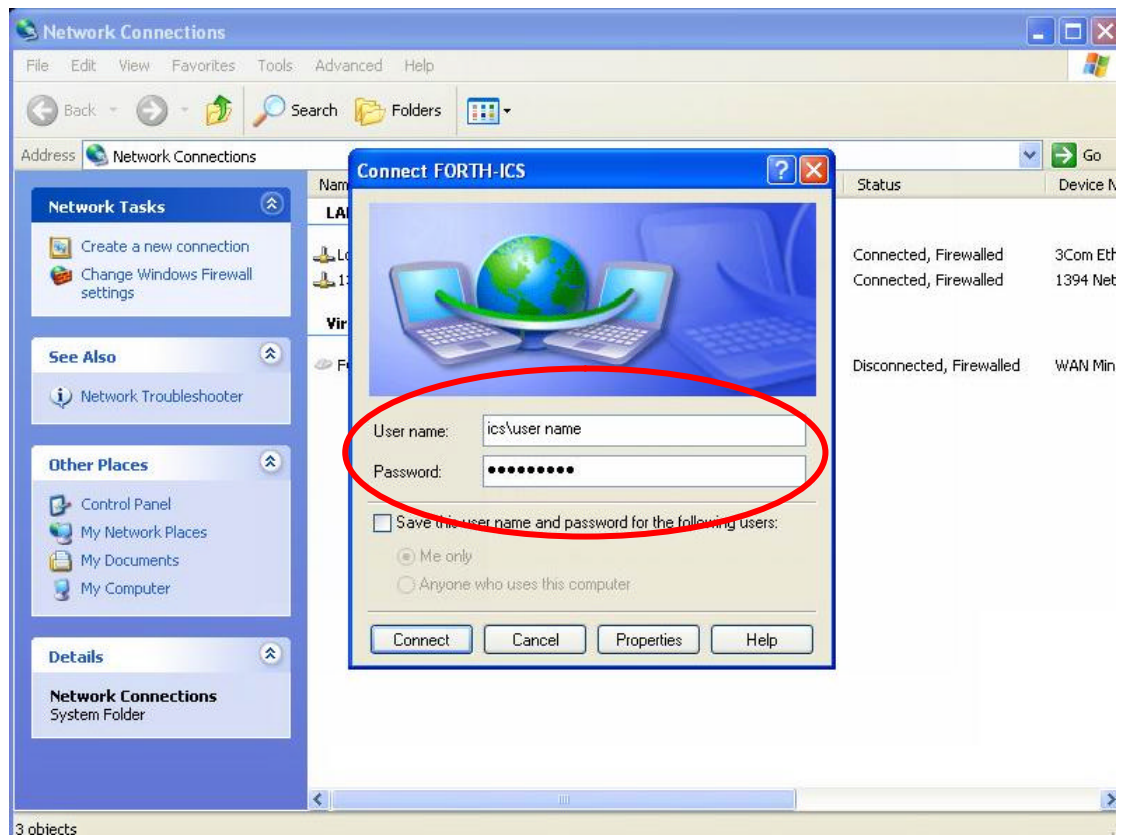

- Select My use only

- Press the finish button.

- Now you should be able to see a new connection under “Virtual Private Network”

- Double click on “FORTH-ICS” connection and type your user name and password to the corresponded fields.

When you click on the “connect” button you will connect to FORTH-ICS intranet getting a valid 139.91.x.x IP address.
